Introduction

During this formation we had the opportunity to treat various aspects of the archaeological field work. We worked in diverse activities with the objective to introduce and make us understand the multiples aspects of the archaeological information treatment, going from the field work to the post-excavation work using diverse tools like computer processing, hand drawing, among others.

Ancient Arles Museum and preventive conservation

In the visit of the museum we could appreciate the importance this institution, due to his multiples researches during the time in the field of subaquatic archaeology, and more particularly since the excavation of the antic wreck Arles-Rhône 3.

About the preventive conservation we can say that we visited the Archaeological depot of Aix-les-Milles where we could see all the archaeological artefacts accumulated by the DRASSM excavations during time.

In this place we learn about the bases of organisation of an archaeological depot and also how to transport the material safely and survey the desalination process.

Conclusion

In conclusion we had done a complete training course that allow us to touch on various aspects of the archaeological field work and post-excavation processes.

This training course can permits us to obtain a base on those diverse fields of work that will eventually allow us to develop this aptitudes in order to become better professionals for the archaeological researches.
